

Resume

Andreas Sandnes

PROFILE

Technically curious and collaborative engineer with experience in data communication, systems monitoring, and troubleshooting. I have worked with the analysis of large volumes of data and with the integration of technical installations, where stable systems, clear communication, and fast problem-solving are essential. I like to work in a structured way and am motivated by understanding how systems fit together.

TECHNICAL SKILLS

General

Data communication, Git, Programming, SQL, AI agents

Cloud / HPC

High-Performance Computing (Computerome)

Bioinformatics

scRNA-seq (10x Genomics, Seurat), DGE (DESeq2, EdgeR)

LANGUAGES

Norwegian (Native)
English (Fluent)
Danish (Fluent)

PROFESSIONAL EXPERIENCE

Technical System Specialist

01/26 – Present

Kiona AS

- I work where software, data and physical technical systems meet. I work with data communication, integrations, and troubleshooting, helping make systems in buildings and retail more visible, connected, and efficient.
- Collaboration is a big part of my work. I work closely with technicians to solve problems and drive projects forward.

Bioinformatician

03/25 – 08/25

National Center for Cancer Immune Therapy (CCIT)

- Built a Python web application (Dash/Plotly) to automate the handling of HLA-typing data output, integrating quality control and streamlining data delivery for immunology research.
- Automated data-conversion workflows in a high-performance Linux environment, removing bottlenecks and accelerating data access for research teams.
- Analysed single-cell RNA-seq data with Seurat to process and interpret complex immunology datasets, directly supporting ongoing cancer immunotherapy research.

PROJECTS

Volunteer developer — Mat til Gaza (politically neutral aid organisation)

- Development and maintenance of the website that promotes the organisation's work.
- mattilgaza.vercel.app (opens new tab).

Master's thesis — collaboration with Amgen Research Copenhagen (ARC)

- Applied statistical tools to separate false positives from potential drug candidates in selections from DNA-encoded libraries.
- Compared the statistical distributions of different datasets to test the compatibility of different analysis methods.

EDUCATION

Master's in Bioinformatics

University of Copenhagen (KU)
09/21 – 06/24

Bachelor's in Biochemistry

University of Copenhagen (KU)
09/16 – 02/20
